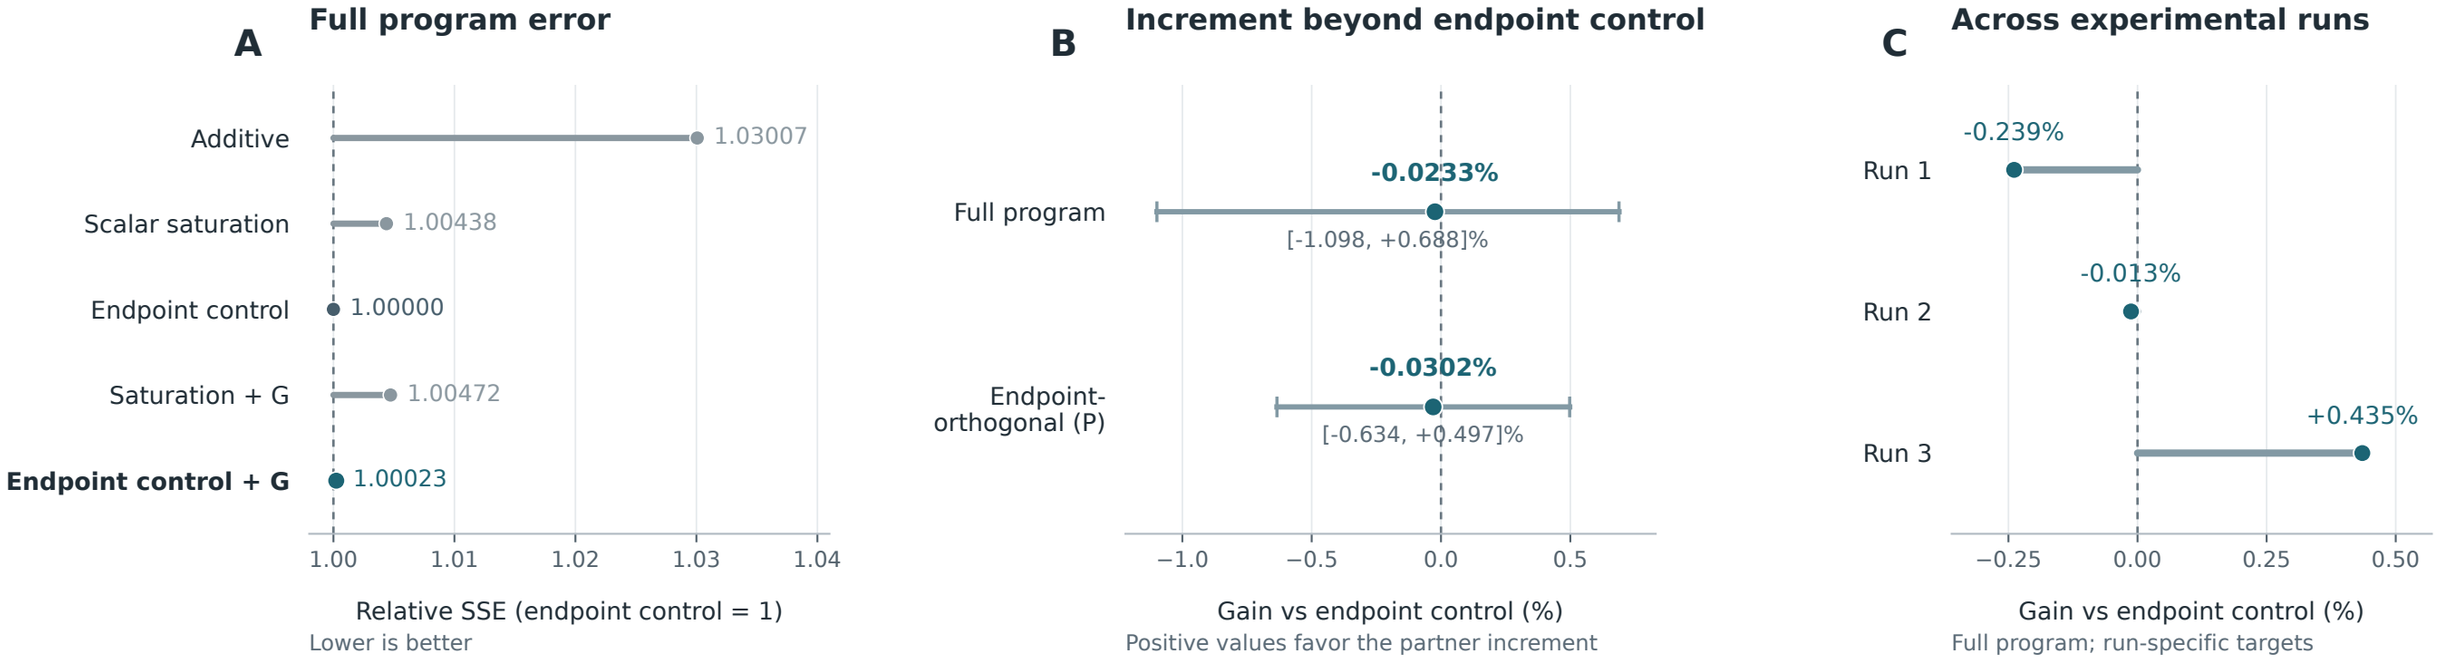
Frozen RNA program confirmation

NOT CONFIRMED

Combi-seq | 374 drug pairs | 36 drugs | 3 experimental runs | 51 G2M genes



B: dots are observed gains. Lines are 2.5–97.5% conditional endpoint-multiplier percentile ranges (4,000 draws).

Predictions remain fixed in these draws; the ranges are not unconditional biological confidence intervals. P denotes endpoint-orthogonal error.

Independent source; drug-combination RNA extension. Prespecified confirmation criteria were not met.
